PAUL STUBLEY

Data Scientist, PhD

— Profile —

A seasoned data scientist coupling technical skill with business understanding. I've focussed on discovering the reality behind the data for over 8 years, using this to inform and influence C-level decisions.

I have experience leading and developing a team of datascientists, supported by a solid foundation of years of individual contribution.

— EXPERTISE —

Senior-stakeholder engagement

moroving key decisions with data

Technical skills:

Data Analysis & Visualisation

Python

Looker

Tableau

JavaScript

Matplotlib

– Outside of Work —

HONEYCOMB.AI | LEAD DATA SCIENTIST

Honeycomb ai is an early-stage startup helping people with restricted diets find food they love

- ▶ Responsible for entire data-science strategy and development of new models, including the company's core NLP model. Defining key data metrics, shifting company to data-led mindset.
- ▶ Working with unlabelled and partially-labelled datasets to train classifiers & RNNs.

Key skills | Data strategy, NLP, Neural nets including RNNs using Keras, Collaborative filtering

DELIVEROO | DATA SCIENCE MANAGER

2019-2020

2020

Deliveroo is a late-stage startup offering logistics based food-delivery across 13 countries

- Adviser to Chief Marketing Officer on global marketing budget allocation (\$100M+).
- ▶ Developing strategy for consumer-behaviour and marketing measurement, including leading the creation of Deliveroo's first econometric model containing marketing features.
- ▶ People- and project-managing team of 6 data scientists, developing pipeline of applicants and onboarding 7 new data scientists. Leading team through large organisational change.
- Overseeing the company's adoption of third-party demographics to augment internal data.

Key skills | C-level presentation, Data strategy, People development, Stakeholder engagemen

DATA SCIENTIST, INTELLIGENCE TEAM

017-201

- Measuring and optimising the return-on-investment of digital and offline marketing.
- Creating tools to democratise data-led decision making to the entire business, e.g. to evaluate the health of our customer cohorts or to understand changes to our traffic/sales.
- ▶ Developing foundational frameworks to enable customer understanding, e.g. segmentation, churn-prediction, customer-lifetime-value, decomposition of metric-changes.
- ▶ Matched-market testing, e.g. to determine the impact of reducing minimum-order-values, leading to global adjustments of minimum order values and ~10% order volume increases..
- ▶ Actively training non-DS colleagues to use the company's data, driving more-informed decisions throughout the business and freeing up time for DS to focus on key projects.
- ▶ Contribution and peer-review of production level code to the daily Analytics SQL Pipeline.
- ▶ Presenting work to Board-level stakeholders, and driving change to business-wide strategy, e.g. redirecting budget from acquisition discounting due to poor return-on-investment.

Key skills | SQL (Snowflake), Git, Python (Pandas, NumPy, SciPy, Matplotlib), Looker, Regression

BAE SYSTEMS, APPLIED INTELLIGENCE | DATA SCIENTIST

2016-201

Applied Intelligence is a data-consultancy that offers cybersecurity and digital transformation

- Quickly adapting to frequent projects changes, creating new visualisation methods for complex data, helping clients understand and interact with their data in new ways.
- Writing custom Python program using Spark ML libraries to classify unlabelled datasets.
- Writing clear code and documentation to enable collaboration and knowledge sharing.

Key skills | VBA, Excel, Visio, Spark ML (Python), Docker, Tableau, Qlikview, PowerB

UDACITY | DataScience Nanodegree

2020

To solidify my DS foundations, I took a self-paced, assessed, 4-month course covering:

DS writing, creating python packages for PyPi, HTML, CSS, JS, Plotly, deploying a Flask app to the web, ETL pipelines for NLP and ML, experimental design and recommendation engines.

UNIVERSITY OF OXFORD | WORCESTER COLLEGE

2012-2016

DPhil (PhD) Atomic and Laser Physics | Fully funded by CASE studentship

My research involved using lasers to create, in the laboratory, conditions that only occur naturally at the centre of planets. This involved experimental computational and theoretical aspects.

- ▶ Presented work to fellow scientists and leaders in the field at 9 international conferences.
- Collaborated with large teams of researchers from both academia and industry.
- ▶ Daily writing of bespoke Python/C++ code to analyse and fit models to large, noisy datasets.
- College tutor for 3rd year undergraduate syllabus explaining complex concepts thoroughly and unambiguously whilst keeping the students' interest.

MPhys - Master of Physics | First Class Honours

2008-2012

First Class grades in each individual examination taken in 1st, 2nd and 3rd year.

RED HOUSE SCHOOL & YARM SIXTH FORM

1993-2008

- ▶ A Levels 5 A's Chemistry, Maths, Further Maths, Physics & General Studies. AS level A in Additional Further Maths. Top 5 nationally in Chemistry, Top 10 in Maths & Further Maths.
- ▶ GCSEs 11 A*s. Highest grades out of 290 independent schools nationally.
